# Company presentation

**GAM** 

Menuiserie Aluminium

Founded in 1997, GAM is a company specializing in the manufacture, installation and marketing of various items of aluminum joinery and facade cladding (doors, windows, canopies, railings, curtain walls, facade cladding, removable partitions. ...)

It offers its customers:

- Advice and specific studies.
- Assistance in the management of their projects.
- Reliable joinery with excellent value for money.

To this end, GAM has a workforce of 115 employees with a management rate of 30% and has a wide range of products that meet the requirements of the European standards in force in terms of sealing, thermal and acoustic insulation, as well as security.

**GAM** provides its customers with its rich experience, know-how and technical skills continuously developed through the training of its teams and the acquisition of equipment and tools specific to each product range. Its offer affects both individuals and professionals (real estate developers, building companies, industrialists, banks, etc.)

**GAM** is one of the most reliable leaders in aluminum joinery both in Tunisia and in Algeria with its subsidiary GAM Algérie (2007) or in Côte d'Ivoire with its subsidiary GAM-CI (2015). It also exports its products to the Mayotte Islands, Libya and Burundi.

GAM is a member of TBP (Tunisia Building Partners), a group of several Tunisian companies operating in the building and construction sectors.

## SOLUTIONS

**GAM** offers everything you need to carry out your projects: Study, solutions and products.

**GAM** collaborates with reliable partners who guarantee quality products and specialized technical assistance if necessary.

**GAM** offers, in addition to the standard solutions specified below, very high-end products such as concertina doors, glass fronts in VEA, "minimal frame" joinery, sliding doors, etc.

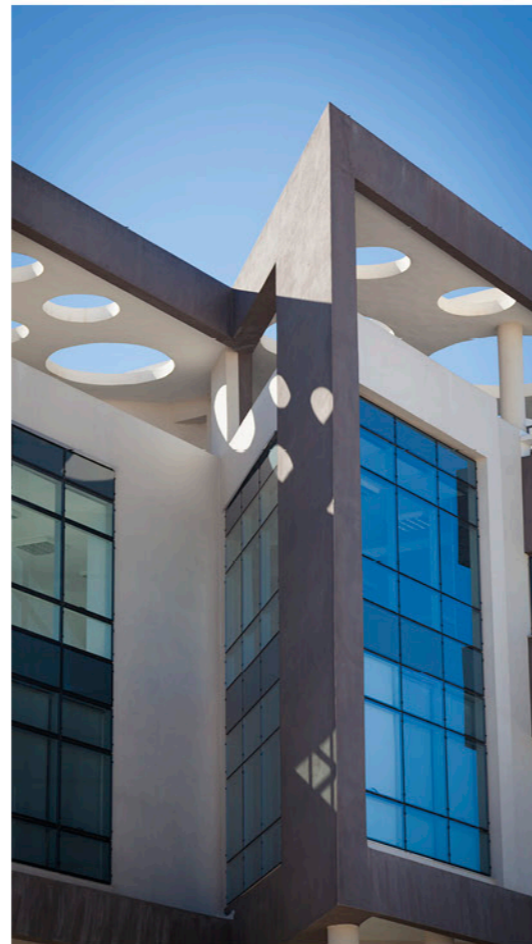

# Standard products and solutions

## Curtain walls

We offer several types of curtain walls including execution studies:

- Bonded Exterior Glazing (VEC): The glazing is bonded to aluminum frames giving the appearance of a fully glazed façade.
- Pare-closed exterior glazing (VEP): The glazing is threaded or bead-closed in a thin aluminum frame giving the appearance of a glazed façade with a very thin aluminum grid.
- Traditional (TRD): The glazing is fixed to the uprights and Crosspieces of the structure by clamping profiles and aluminum covers giving the appearance of a glazing façade with aluminum screening.
- With BH horizontal bands: A variant of TRD curtain walls, the glazing is fixed only on the crosspieces of the structure, giving a completely band-like appearance.
- Smooth or false VEC facades: The glazing is fixed to the structure by specially designed fixing parts. The hollow joints between the glazing are filled with a smooth structural silicone giving the appearance of fully glazed facades with a silicone weave.

## Facade cladding

The composite panel is a multilayer panel made up of two pre-lacquered aluminum sheets glued on either side of a polyethylene core. Thanks to its exceptional characteristics, its ability to be shaped and the wide range of colors and finishes, this coating gives a modern touch and a certain lightness to architecture.

## Ventilated facades

A ventilated facade is a building system that is widely accepted by architects and builders, especially for its high quality, for its aesthetic possibilities and for its undisputed advantages in thermal and acoustic insulation.

## Menuiserie : Fenêtres et porte fenêtres

A large choice of ranges of profiles and glazing allows the realization of any type of joinery, classic or modern. Whether cold profiles or thermal break profiles combined with a judicious choice of glazing, we can produce joinery:

- Sliding ;
- Swing with opening :
  - French style
  - Italian style
  - Gusseted
- Tilt and turn ;

## Roller shutters

Absolutely essential for protecting yourself from the sun, creating darkness and reinforcing the thermal insulation of aluminum frames. Extruded roller shutters can be a first barrier to break-ins.

Several motorization solutions are available.

Roller shutter slats can be:

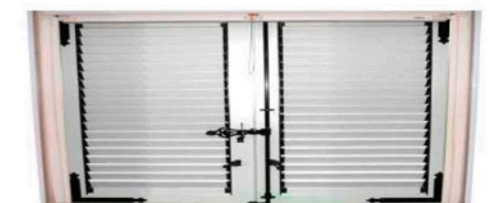

- PVC
- In injected aluminum
- In reinforced injected aluminum
- Extruded: they make it possible to design rolling shutters with large spans. They also have

## Aluminum louvers

Shutters combine the charm of tradition with the advantages of aluminum for protection from the sun.

They are resistant, secure and aesthetic.

## Jealousy

Intended for both buildings and villas, particularly used in Africa, this system lets in maximum light while promoting natural ventilation with a minimum of space.

## Mosquito net

Different solutions for protecting flying insects are available:

- Fixed
- Sliding
- Rollable
- Pleated
- Etc.

## Glass roof systems

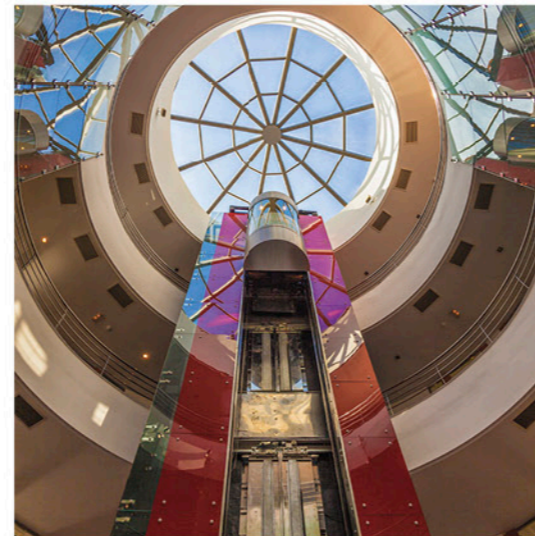

The glass roof, a real source of light, comes in several shapes:

- Pyramids with a square base;
- Pyramid with rectangular base,
- Two-sided;
- Single slope or flat;
- Conical.

They can be fixed or sliding.

Possibility of integrating openings operated by electric cylinders.

A veranda, tailor-made for the recommended space to provide light and comfort, Source allows you to save or optimize your space

## Aluminum partitions

For an optimized and ergonomic workspace with preserved user-friendliness.

Aluminum structure:

- Glazed for more light.
- Full for greater confidentiality.

## Sunblades / Shading systems

By giving buildings a modern appearance, sunshades help protect glass facades from the sun's rays for better comfort and energy savings.

They are made of aluminum profile blades of different shapes (airplane wings, rectangular, Z-shaped, etc.)

## Guardrail / Stair railing

Safety and modernity in perfect harmony: they can be attached to stairs, balconies or low windows. Their shapes and dimensions vary depending on the need and destination.

GAM supplies railings or stair railings in lacquered aluminum or brushed stainless steel-look aluminum as well as fully glazed railings.

## Mixed aluminium-wood joinery

Ideal solution to have very high-quality wooden joinery inside homes with aluminum frames on the outside to resist bad weather. This solution combines the aesthetics and authenticity of wood with the advantages of aluminum on the exterior.
